Sliding Bed System

CLOSED POSITION - OVERALL DIMENSIONS

The Sliding Bed System can extend to different widths to suit the available space inside your camper, up to a maximum wooden frame width of 122 cm. In our camper, 130 cm cushions were used to cover the frame and the small gap between the bed and the van wall. Your finished sleeping width will depend on the dimensions of your van, the depth of the wheel arches, the thickness of the insulation and lining, and the cushions you choose.

Please note: Each item is handmade, so finished dimensions may vary slightly from those shown. Wood is a natural material; variations in grain, colour and markings, including occasional knots and minor surface imperfections, are to be expected and make every piece unique.
